

NIHAR GUDADHE

Data Scientist

Nagpur, India | +91- 9168844536 | gudadhenihar@gmail.com | [LinkedIn](#) | [GitHub](#)

SUMMARY

Data Scientist with hands-on experience across the full data science lifecycle: EDA, feature engineering, model building, and evaluation for prediction, classification, and time series forecasting problems. Comfortable working in Python and SQL, with a solid grounding in statistics and a track record of turning messy business problems into working ML solutions, most notably integrating CRM and ERP systems to streamline the Quote-to-Cash process. Also exploring Generative AI and LLMs (prompt engineering, RAG) alongside the core ML/analytics work in Power BI.

TECHNICAL SKILLS

Programming: Python, SQL, PostgreSQL, R (Secondary)

Libraries & Frameworks: Pandas, NumPy, Scikit-learn, XGBoost, TensorFlow, PyTorch, Matplotlib, Seaborn, NLTK, spaCy, OpenCV

Machine Learning: Regression, Classification, Clustering, Time Series Forecasting, Ensemble Methods, Dimensionality Reduction (PCA), Anomaly Detection, Feature Engineering, Feature Selection, Model Evaluation, Cross-Validation, Hyperparameter Tuning, Bias-Variance Trade-off, SMOTE

Deep Learning: Artificial Neural Networks (ANN), CNN, RNN, LSTM, GRU, Encoder Decoder, Attention Mechanism

Natural Language Processing: Text Preprocessing, Tokenization, Word Embeddings, Named Entity Recognition, Sentiment Analysis

Data Visualization: Power BI, DAX, Power BI Service, Tableau, Excel,

Databases & Tools: MySQL, PostgreSQL, Fast API, Docker, Git, GitHub, Jupyter Notebook, VS Code, CICD, Render, AWS

Core Concepts: Statistical Analysis, Probability & Statistical Inference, Hypothesis Testing, Confidence Intervals, A/B Testing, EDA, Data Cleaning, Data Visualization, Feature Engineering, Data Modeling, Data Labeling

CONCEPTUAL KNOWLEDGE

Generative AI: Familiar with Large Language Models (LLMs), Prompt Engineering, RAG frameworks, Hugging Face Transformers, and LangChain architecture.

Computer Vision: Understanding of Image Classification, Image Annotation, Object Detection (YOLO), OpenCV functions, and Image Segmentation techniques.

PROFESSIONAL EXPERIENCE

Data Analyst | Influx Control Panel, Nagpur

Feb 2024 – Present

- **Enterprise Data Integration:** Architected and maintained a unified data pipeline connecting CRM and ERP systems to eliminate data silos and provide a "single source of truth" for management.
- **Operational Efficiency:** Developed a Production Line Efficiency Dashboard that tracked cycle times and machine idle time, identifying bottlenecks that led to a **12%** increase in shop-floor throughput.
- **Demand Forecasting & Inventory:** Built a time series forecasting model using historical sales and production data to predict demand for electrical components, reducing inventory holding costs by **18%** and minimizing stockouts.
- **Sales Performance Analytics:** Designed a 360-degree customer dashboard in Power BI that empowered the sales team to prioritize high-value segments contributing to a **10%** improvement in sales conversion rates.

- **Quality Assurance:** Applied anomaly detection techniques in an automated defect-analysis report that correlated raw material batches with support tickets, helping the engineering team reduce product return rates by **14%**.
-

PROJECTS

Shoppers Intent MLOps Pipeline

Tools: Python | FastAPI | MySQL | PostgreSQL | Scikit-learn | XGBoost | LightGBM | MLflow | Evidently AI | Docker | Render

- Built an end-to-end production-grade MLOps classification system predicting online shopper purchase intentions using Random Forest, XGBoost, and LightGBM, optimized with hyperparameter tuning via GridSearchCV and SMOTE for class imbalance.
 - Developed an interactive web frontend and FastAPI backend for live user session risk evaluation and instant prediction probabilities.
 - Implemented automated experiment tracking and model registration via MLflow, containerized with Docker, and deployed live on Render with automated data drift monitoring using Evidently AI.
-

Laptop Price Prediction System

Tools: Python | Flask | FastAPI

- Built an end-to-end machine learning pipeline for laptop price prediction, with a modular structure separating data ingestion, transformation, and model training scripts under.
 - Added automated execution logging via a dedicated directory to track pipeline runs, debug issues, and monitor execution metrics.
 - Wrote a verification script to validate model checkpoint loading, artifact integrity, and pipeline outputs before deployment.
 - Deployed a web app using Flask/FastAPI, backed by structured artifact storage for price estimation.
-

Enterprise CRM & ERP Operational Analytics Framework

Tools: Python | SQL | PostgreSQL | PowerBI | ETL Pipelines | Data Integration | Data Modeling

- **Data Integration & ETL:** Engineered automated Python and SQL ETL pipelines to migrate and sync daily CRM transaction data and ERP material logs into a unified data warehouse/staging database.
 - **Predictive & Pipeline Analytics:** Developed data models to evaluate historical quotation win-loss ratios and KPIs, identifying high-margin configurations for custom products like Motor Control Centers and APFC Panels.
 - **Inventory Forecasting:** Mapped sales pipeline opportunities to multi-level Bills of Materials (BOM) in the ERP to perform predictive maintenance of stock levels, establishing automated data alerts to prevent factory floor stockouts.
 - **Business Intelligence (BI) Reporting:** Built interactive Power BI dashboards for senior stakeholders, tracking Lead-Time Variance, BOM Cost Slippage, and Inventory Turnover Ratios.
-

EDUCATION

B.E in Computer Science Engineering | Sipna College of Engineering, Amravati

CERTIFICATIONS

- [Data Science Essentials with Python](#) | [Cisco Networking Academy](#)
- [Diploma in Machine Learning using Python](#) | [Alison](#)
